

WIC Green Breastpumps EPP Program

Hygeia offers green, multi-user breastpumps that can be shared as long as each mother has their own breastpump PAS (Personal Accessory Set). We now offer an EPP (Environmentally Preferred Product) Program.

Here is how the program works: Hygeia will issue a call tag for UPS to pick up the breastpump, PAS and power supply. The plastic breastpump PAS will be recycled. The breastpump will be factory remanufactured to our original specifications. Your breastpump, a new PAS and tote will be packaged in a box and will be shipped to whomever you designate in the continental USA.

An Environmentally Preferred Product means that a product, good or service has a lesser or reduced effect on human health and the environment compared with a similar competing product, good or service. Hygeia breastpumps meets California and Federal Government requirements for EPP.

• Easily recycle your breastpump personal accessory set. Otherwise, tens of thousands of these sets can clog our landfills

• Save money with low cost remanufactured breastpumps brought back to original specifications and same warranty as NEW

• Avoid fraudulent dispensing of breastpumps by requiring return of the breastpump via the EPP program

• Avoid mothers selling their breastpumps on Craigslist or eBay

• Easy returns using the UPS call tag that is included. Simply box up the breastpump, power supply and PAS securely, call UPS for pick up and we take care of the rest. Ship either from mom or from your agency

Hygeia breastpumps are built for durability and long life. We respect the environment and want to decrease the amount of product going into the landfills. We have made our breastpumps multi-user so that your agency can now offer a convenient EPP program that will recycle your personal accessory set and breastpump. It is a great program and best of all, the next user of the breastpump can use this program as well.
